

An aerial photograph of a large-scale construction project. The site is filled with light-colored sand and dirt, showing extensive tire tracks. Several large, circular concrete structures are visible, some with white outlines. There are also rectangular concrete structures, some of which are filled with dark material. A few small vehicles, including a yellow one, are scattered across the site. The overall scene depicts a major infrastructure or industrial construction project.

ARKIL IN BRIEF

This is the annual report for Arkil A/S, which is a subsidiary of the Arkil Group and primarily comprises the Group's Danish activities.

The Arkil Group was founded in 1941 by civil engineer Ove Arkil and has developed into an international construction company with activities in Germany and Ireland, in addition to Denmark. The Group has been family-owned for three generations.

The company's nationwide activities are carried out by local and regional branch offices and production sites. The head office is located in Haderslev.

Arkil places great emphasis on its values, with responsibility, integrity and reliability being the key parameters for the company's future growth in all business areas and locations.

Arkil doesn't only carry out construction projects. We give back to the local communities we are part of, for example through local engagement and employment, education of apprentices and placement students, as well as participation in initiatives that benefit society and not only our own interests. Arkil is committed to the shared development of the industry through active participation in organisational work and strives to ensure a safe and healthy construction and civil engineering sector that paves the way for others and creates value for all. Arkil is aware of its other social responsibility, including in relation to diversity, sustainability, the environment and climate.

Today, Arkil performs traditional construction work on behalf of local authorities, utility companies and private sector clients and also designs and implements major complex infrastructure projects on behalf of government agencies within the road, rail and port sectors. Our knowledge and core expertise are constantly being strengthened and developed through a targeted focus on specialisation and consistent project management.

There is a continuous focus on integrating specialist construction expertise across the various business areas. These include civil engineering works, bridge and concrete projects, construction pits, shell constructions, asphalt production, asphalt spreading, railway work, renovation, operation and maintenance of sewage systems and road infrastructure including municipal park and road projects as well as foundation works, groundwater lowering, environmental engineering projects and port and hydraulic engineering projects.

Arkil is currently a substantial player in the Danish market with nearly 1,200 employees in Denmark and a revenue of DKK 2.4 billion in 2023.

At Group level, turnover is approximately DKK 4.1 billion, distributed among just over 2,000 employees in Denmark, Germany and Ireland.

AT ARKIL, WE HAVE THE FOLLOWING FIVE BASIC VALUES:

FINANCIAL HIGHLIGHTS FOR ARKIL A/S

(DKK million)	2023	2022	2021	2020	2019
INCOME STATEMENT					
Revenue	2,361.5	2,351.0	2,241.7	2,129.6	1,958.8

FINANCIAL PERFORMANCE IN 2023

The company's revenue increased to DKK 2,361.5 million in 2023 compared to DKK 2,351 million in 2022.

The primary operating profit for 2023 totals DKK 100 million, compared to a profit of DKK 28.7 million in 2022, corresponding to a profit margin of 4.2% compared to 1.2% in 2022.

The year's activity has been realised at the level expected at the beginning of 2023, while the year's primary operating profit has been realised to a much greater extent. As expected, previous years' fluctuations in energy and supplier costs have stabilised. At the same time, the company has realised a wide range of projects with a satisfactory result and avoided negative impacts from major loss cases.

The company's net profit before tax in 2023 was DKK 97.5 million compared to a profit of DKK 30.3 million in 2022. After tax, the company's net profit result was DKK 76.6 million compared to a profit of DKK 24.6 million in 2022.

At the end of 2023, the equity ratio was 32.2% compared to 27.9% at the end of 2022, and net interest-bearing debt was DKK 225.4 million compared to DKK 227.3 million at the end of 2022.

Events after the end of the period

The Board of Directors and Executive Board are not aware of any events that have occurred after the end of the financial year that are of significance to the company's economic or financial position.

Expectations for 2024

At the start of 2024, there are prospects of a busy construction market, where energy conversions in particular will continue to characterise the activity. The construction market is expected to decline.

The company has strong financial contingency and a robust order stock, meaning that, everything else being equal, expectations for 2024 activity levels can be met.

For 2024, a slight increase in activity and a primary operating profit ratio of between 3% and 5% are expected.

THE COMPANY'S DEVELOPMENT IN 2023

The company's turnover in Denmark amounted to DKK 2,341.7 million and has thus increased by 1.8% from 2022, when turnover amounted to DKK 2,300.1 million. The company's foreign sales amounted to DKK 19.8 million compared to DKK 50.8 million in 2022.

2023 started with a good level of activity early in the year, primarily as a result of a favourable order backlog and a mild winter that did not significantly disrupt production.

The year has been characterised by a great appetite for investment from the utilities, and we have carried out many tasks for district heating companies, waterworks and energy companies.

In addition, there have been tasks for both the government, municipalities and private developers at the usual level.

Earnings in 2023 improved significantly compared to previous years. The risk profile for projects in 2023 has been more favourable in terms of diversification in size and complexity. Overall, this has meant an improvement in earnings on our projects.

For two decades, Arkil has strived to offer more construction projects with a greater focus on cooperation, innovation and risk management. One of the possible routes is through so-called partnering tenders. It is thus with great satisfaction that we have entered into several new contracts over the course of this year following this model.

RISK MANAGEMENT

The Board of Directors of Arkil annually evaluates and approves the strategic plans for the company and the individual business segments. Arkil's activities within the construction industry involve a number of commercial and financial risks.

Risk management is predominantly aimed at hedging risks in the company's most crucial business process, which is project management. Project management covers the phases from the invitation to tender to implementation. Based on the scope and complexity of each task, a systematic assessment is carried out on project risks in all phases, in which various parts of the organisation are involved at different times in the process.

The company's risk committee is tasked with ensuring that significant risks are highlighted and managed in advance and always receive the necessary attention within the implementing organisation and line management. The risk management process contributes to ensuring that the company engages in projects with an acceptable risk profile within the company's areas of expertise.

Commercial risks

Arkil's activities involve a number of commercial and financial risks. The company's strategy is to minimise and hedge commercial and financial risks through established risk management.

The company's key activities are predominantly routine tasks with known risks that can be minimised through risk management. The most significant operating risk for the company depends on the ability to be flexible, with the possibility of rapid adjustment to current market conditions within the company's business areas being a key factor.

Major specialist projects are often carried out in collaboration with specialists, ensuring that risks are reduced. Collaborations based on partnering and early tendering, in which contractors are involved in the projects before initiation of the design and planning phases, strengthen risk coverage in projects.

The company's insurance strategy is to cover significant risks that are beyond its direct control and that may pose a threat to the Group's financial position and existence.

Factors that may result in the realised profits deviating substantially from expectations include, but are not limited to: developments in economic trends and financial markets, losses arising from large stand-alone projects, technological developments, changes to laws and regulations in Arkil's markets, competition, the

supply of tasks within the company's business areas, weather and climate conditions in the company's markets, and the acquisition and sale of activities and companies.

As an inherent part of the nature of the business, the company is a party to various disputes, as well as legal and arbitration cases. A realistic assessment of the possible outcomes is sought in the financial valuations, but whatever the outcome of the cases, there can be both a positive and a negative impact on the accounts.

Raw material risks

Based on a risk assessment, the company's policy is to cover financial risks in future fluctuations in raw material prices included in the company's services.

Such risks are generally covered by entering into fixed price agreements with suppliers concerning deliveries to projects. To the extent that fixed price agreements are not entered into, the risk is covered selectively based on a risk assessment in accordance with the company's policy using financial instruments in the form of raw material swaps.

Financial risks

As a result of operations, investments and financing, the company is exposed to changes in exchange rates and interest levels. The company's policy is not to engage in active speculation of financial risks. The company's financial management thus focuses solely on the management of risks that are a natural part of its operations. The company's financial risks are predominantly covered through the allocation of revenue and costs in the same currency, as well as through the use of derivative financial instruments in accordance with policies approved by the Board of Directors.

Foreign exchange risk

The company's policy is to limit the impact of currency exchange fluctuations on the company's returns and financial position. Revenue in foreign currency is not indicative of the company's foreign exchange risk as the majority of costs relating to foreign revenue are in the same currency.

The company's foreign exchange position is centrally managed and coverage is selective. Positions are only taken based on business conditions. The company has transactions/exposure in EUR and SEK, but management does not consider that there is any significant currency exchange risks in relation to this. The company does not otherwise have any substantial foreign exchange exposure.

Interest risk

Interest on interest-bearing holdings is variable. The company's interest-bearing net debts, recognised as debt to credit institutions less cash, amounted to DKK 225.4 million at the end of 2023 compared to DKK 227.3 million at the end of 2022. A 1% rise or drop in the interest level compared to the balance sheet date would only have an insignificant impact on the company's returns and equity.

Cash flow risks

The company's policy on borrowing is to ensure the greatest possible flexibility through diversification of borrowing on maturity/renewal dates and counterparties with regard to pricing. The company's cash reserves consist of cash and cash equivalents, securities and unused credit facilities. The company's aim is to have a sufficient cash position to continue to act effectively in the event of large seasonal fluctuations in cash flow, as is characteristic of the construction industry.

Credit risks

The vast majority of the company's customers are public and semi-public clients for which the risk of financial loss is considered minimal. The company's receivables from sales to other customers are exposed to ordinary credit risk.

A critical credit check is carried out on customers before construction contracts are entered into. Furthermore, receivables from sales to other customers are covered to the appropriate and necessary extent through payment guarantees in the form of bank guarantees and credit insurance. The company does not have any significant risks relating to individual customers or partners.

Impact on the external environment

As a construction company, we are conscious of the fact that our activities influence the environment. On the basis of our environmental and climate policy, we therefore have a continual focus on minimising our negative impact on both the local and the global climate and environment to the greatest extent possible. The most significant risks relating to climate and the environment are linked to our energy consumption and the use of materials. To minimise these risks, we are undertaking work to reduce energy consumption and develop new, environmentally friendly materials and workflows. We also stay abreast of development possibilities in the industry that could have a positive impact on the area of climate and environment. This area is also described in the CSR report.

IT Security

The company's activities are highly dependent upon the use of established IT systems and the security relating to these. Any prolonged downtime or other system weaknesses could be substantially damaging to the company.

The management has created an IT policy that is discussed and updated by management on an ongoing basis. The purpose of the policy is to protect the company's data, systems and intellectual property. Specific data security systems have been established in the form of email filters, anti-virus software, firewalls and monitoring programmes.

CORPORATE SOCIAL RESPONSIBILITY AND GENDER OMPOSITION IN MANAGEMENT

Corporate social responsibility, including the gender composition of management, is an integrated part of Arkil's business strategy.

The company has a desire to act responsibly and to create value in relation to customers, employees, business partners and society as a whole. Arkil has chosen to include mandatory corporate social responsibility reporting, cf. Sections 99a and 99d on social responsibility in the Danish Financial Statements Act, as part of its CSR report. This is available on the company's website, see www.arkil.dk/csr-rapport.

Under-represented gender on the board of directors and other management levels in accordance with Section 99b

The Board of Directors of Arkil A/S is made up of the ultimate owners and the Group COO of Arkil Holding A/S. It currently consists of three male board members. For the Board of Directors of Arkil A/S, a target of 25% has been set for the proportion of elected female board members ahead of the 2024 annual general meeting. Unfortunately, the target has not been achieved. We have therefore set a new target of 25% for the proportion of female board members elected at the annual general meeting, which must be achieved before the annual general meeting in 2028.

Arkil strives to ensure fulfilment of the target by increasing the proportion of females on the Board of Directors in connection with natural resignations and the nomination and election of new board members, taking into account the overall expertise of the board and members' individual qualifications.

	2023
The highest management body	
Total number of members	3
Under-represented gender in percent	0
Target figure in percent	25
Year for achieving the target	2028
Other management levels	
Total number of members	16
Under-represented gender in percent	25
Target figure in percent	29
Year for achieving the target	2027

The other management level consists of the executive board, directors and staff managers. The total number of people at the other management level is 16, with the proportion of the under-represented gender consisting of four women (25%). The target for the under-represented gender is 29%, which must be achieved by 2027. The initiatives to achieve this target are described in adopted policies and include the initiatives below.

In our work in 2023 to promote gender diversity and inclusion at Arkil, we have established a number of initiatives and policies to create a more diverse and equal working environment:

- In our job postings, we encourage qualified applicants of all genders and ethnicities to apply for our vacant positions.
- We support our female apprentices in their role as ambassadors for Boss Ladies, where they work to spread the important message that the construction industry is just as much for women as it is for men.
- We strive to assess and minimise bias in communication, profiling and in the physical working environment to ensure an inclusive culture.
- Our managers play a key role in ensuring that employees on maternity leave remain connected to the workplace, for example through maternity interviews or by keeping them continuously updated on the company's activities.
- We offer flexible career paths that respect and take into account employees' life phases, enabling them to resume and continue their careers at the same level after life events such as maternity or parental leave and illness.
- In connection with the recruitment process, we ensure that job postings are gender-neutral and inclusive, even when we work with external recruitment agencies.
- In connection with the recruitment process, we strive to ensure that representatives of several genders are invited for an interview, that the interviews are conducted in a way that minimises the impact of unconscious bias, and that any use of tests is targeted at the tasks, characteristics, qualifications and competences required for the position.
- We promote a healthy work-life balance by offering flexibility and supporting changing career choices as an integral part of a long working life, recognising the changing needs and priorities of our employees.

- We are an initiator and member of the Danish Construction Diversity Day association, which was established in 2022 in collaboration with other key players from the industry. This association, which now includes several companies from the construction industry, is a testament to our commitment to promoting diversity and inclusion in the sector. Through these initiatives and partnerships, we are focused on creating a more inclusive and diverse future for the building and construction sector.

These are just some of the initiatives we are actively working with to create a more diverse, inclusive and fair working environment. However, the challenge lies in finding qualified candidates from all backgrounds for certain specific positions in the construction industry, where the gender balance has historically been uneven. This challenge is confirmed by the number of women in Arkil, who, despite a proactive attitude and targeted efforts to promote gender diversity, still do not exceed the industry average of 10%. This is a clear signal that there is still a lot of work to be done to break the traditional gender roles and create a more equal working environment in the industry.

THE INDEPENDENT AUDITOR'S REPORT

To the shareholders of Arkil A/S

Conclusion

In our opinion, the annual accounts give a true and fair view of the company's assets, liabilities and financial position as of 31 December 2023, as well as of the results of the company's activities and cash flow for the financial year 1 January – 31 December 2023 in accordance with the Danish Financial Statements Act.

We have audited the annual accounts for Arkil A/S for the financial year 1 January – 31 December 2023, including the profit and loss statement, balance sheet, statement of changes in equity, cash flow statement and notes and the applicable accounting policies ('the accounts').

Basis for the conclusion

We have conducted our audit in accordance with international auditing standards and additional requirements applicable in Denmark. Our responsibilities under these standards and requirements have been described in more detail in the section of the auditor's report on the Auditor's responsibility for the auditing of the annual accounts. We are independent of the company in accordance with the International Ethics Standards Board for Accountants' international guidelines for the ethical behaviour of professional accountants and auditors (IESBA Code) and additional ethical requirements applicable in Denmark, and we have met our other ethical obligations under these requirements and according to the IESBA Code. We believe that the audit evidence obtained is sufficient and appropriate to provide a basis for our opinion.

Statement on the management report

The management is responsible for the management report.

Our opinion on the accounts does not include the management report and we do not express any form of opinion with any certainty with regard to the management report.

In connection with our audit of the accounts, it is our responsibility to read the management report and thereby consider whether the management report is significantly inconsistent with the accounts or, based on the knowledge gained through our audit or otherwise, appears to contain material misstatements.

We are also responsible for considering whether the management report contains the information required pursuant to the Danish Financial Statements Act.

Based on the work performed, it is our opinion that the management report is consistent with the annual accounts and has been prepared in accordance with the requirements set out in the Danish Financial Statements Act. We have not identified any material misstatement in the management report.

Management responsibility for the accounts

The management is responsible for the preparation of annual accounts that provide a true and fair view in accordance with the Danish Financial Statements Act. The management is also responsible for such internal control as deemed necessary by the management in order to prepare accounts that are free from material misstatements, whether due to fraud or error.

In preparing the accounts, management is responsible for assessing the company's ability to continue its operations and also for preparing the accounts on the basis of the accounting principle of continued operations, unless the management either intends to liquidate the company, cease operations or has no other realistic alternative but to do so.

Auditor's responsibility for the accounts

Our aim is to achieve a high degree of certainty that the accounts as a whole are free from material misstatements, whether due to fraud or error, and to submit an audit report with an opinion. A high degree of certainty is a high level of assurance but not a guarantee that an audit, performed in accordance with international audit standards and additional requirements applicable in Denmark, will always identify material misstatements when such exist. Misstatements can arise as the result of fraud or error and may be regarded as material if it can be reasonably expected that, individually or collectively, it has an influence on the financial decisions made by users on the basis of the accounts.

As part of an audit performed in accordance with international auditing standards and the additional requirements applicable in Denmark, we carry out professional assessments and maintain professional scepticism during the audit. This includes:

- Identifying and assessing the risk of material misstatements in the accounts, whether due to fraud or error, designing and performing audit procedures in response to these risks, as well as obtaining audit evidence that is sufficient and appropriate for providing a basis for our opinion. The risk of not identifying material misstatements due to fraud is

higher than material misstatements due to error, as fraud may include conspiracy, forgery, deliberate omission, misrepresentation or breach of internal control.

- We achieve an understanding of internal control with relevance to the audit in order to design audit procedures that are appropriate for the circumstances, but not to express an opinion on the effectiveness of the company's internal control.
- We consider whether the accounting policies applied by management are appropriate and whether the accounting estimates and related information prepared by management are reasonable.
- We conclude whether the management's preparation of the accounts based on the accounting principles concerning continued operations are appropriate and whether, on the basis of the audit evidence obtained, there is significant uncertainty linked to events or conditions that could create significant doubt about the company's ability to continue operations. If we conclude that there is significant uncertainty, we must draw attention to such information in the accounts in our auditor's statement or, if such information is not sufficient, modify our opinion. Our opinions are based on the audit evidence that has been achieved up to the date of our auditor's report. However, future events or circumstances may result in the company no longer being able to continue operations.
- We consider the overall presentation, structure and contents of the accounts, including note information and whether the accounts reflect the underlying transactions and events in such a manner that a true and fair view is presented.

We communicate with senior management with regard to e.g. the scheduled scope and timing of the audit as well as significant audit observations, including material non-conformities relating to internal control as identified during the audit.

INFRASTRUCTURE

Arkil carries out large-scale, complex infrastructure projects in the field of railways, motorways, bridges and port expansion.

CIVIL ENGINEERING

Arkil has over 80 years of experience in carrying out all types of civil engineering projects. This includes road and sewerage projects, site development, cable projects and supply lines.

BRIDGE & CONCRETE

We are specialists in new construction and renovation of concrete structures, e.g. bridges, sliding formwork, wastewater treatment plants, car parks, bridge lifts and bridge pushes, as well as the execution of complex shell constructions and civil engineering structures.

FOUNDATIONS

Arkil builds on more than 35 years of experience with all types of foundation and post-construction foundation projects in Denmark and Northern Germany. In addition to pure foundation-centred projects, we also offer timbered trench construction, hydraulic engineering and sheet piling installation.

ROAD MAINTENANCE

We take care of operation and maintenance of roads and green areas, e.g. waste collection, snow clearance and salting, grass cutting, crash barrier and marker post replacement, the posting of road signs, smoothing out roadsides and drainage from roads and ditches.

GROUNDWATER LOWERING

Groundwater lowering is one of Arkil's key areas of expertise, and we excel in lowering, pumping and remediating groundwater.

ASPHALT

We create and supply asphalt surfacing for roads, car parks and industrial areas with conventional asphalt or BSM asphalt with 100% recycling of the road's existing materials.

ENVIRONMENTAL ENGINEERING

Arkil offers turnkey solutions for soil and groundwater pollution and has built up a large body of expertise within the clean-up of contaminated land using a variety of different clean-up techniques.

NOTES Note no. 1 Accounting practice

General information

The annual report for Arkil A/S has been presented in accordance with the provisions set out for class C enterprises, large, in the Danish Financial Statements Act.

Consolidated accounts have not been prepared pursuant to Section 112, subsection 1 of the Danish Financial Statements Act. The annual accounts for Arkil A/S and associated subsidiaries are included in the consolidated accounts for Arkil Holding A/S, Haderslev.

The annual accounts have been submitted in accordance with the same accounting policies as last year.

The annual report is presented in Danish kroner rounded to the nearest DKK 1,000.

General information about recognition and measurement

Assets are recognised in the balance sheet when it is probable that the company will experience future financial benefits and the value of the asset can be reliably measured.

Liabilities are recognised in the balance sheet when they are probable and can be reliably measured.

At initial recognition, assets and liabilities are measured at cost price. Assets and liabilities are subsequently measured as described for each individual accounting item below.

Certain financial assets and liabilities are measured at amortised cost, which recognises a constant effective rate of interest over the maturity period. Amortised cost price is calculated as the original cost price less any instalments plus/minus the accumulated amortisation of the difference between the cost price and the nominal amount.

Recognition and measurement take into account gains, losses or risks that occur before the presentation of the annual account and that confirm or rule out matters existing on the balance sheet date.

Revenue is recognised in the profit and loss statement in line with being earned, including recognition for value adjustments for financial assets and liabilities measured at market value or amortised cost price. Furthermore, costs incurred to achieve the year's earnings are also recognised, including depreciation, amortisation and provisions, as well as reversals due to changed accounting estimates on amounts previously recognised in the profit and loss statement.

Tables and accounts

Parentheses are used around negative results and deductions.

Conversion of foreign currency

Transactions in foreign currencies are converted at initial recognition to the exchange rate applicable on the transaction date. Currency exchange differences that arise between the exchange rate on the transaction date and the exchange rate on the payment date are recognised in the profit and loss statement.

Outstanding amounts, debts and other monetary entries in foreign currencies are converted at the exchange rate applicable on the balance sheet date. The difference between the exchange rate on the balance sheet date and the rate on the date when the amounts owed or debt arising was recognised in the latest annual accounts is recognised in the profit and loss statement under financial income and costs.

For recognition of foreign subsidiaries, the profit and loss statements are translated to an average exchange rate for the month and the balance sheet items are translated to the exchange rate applicable at close of the balance sheet date. Currency exchange differences arising from the conversion of foreign subsidiaries' equity at the start of the year to the exchange rates on the balance sheet date, and when translating profit and loss statements from average exchange rates to the exchange rate applicable at close of the balance sheet date, are recognised directly under equity.

Adjustment of outstanding accounts with independent foreign subsidiaries that are considered part of the total investment in the subsidiary are recognised directly in equity. Similarly, exchange rate gains and losses on loans and derivative financial instruments used to hedge foreign subsidiaries are recognised directly in equity.

Derivative financial instruments

IAS 39 is used in the interpretation of the Danish Financial Statements Act for derivative financial instruments.

NOTES Note no. 1 Accounting practice used (continued)

Derivative financial instruments are initially recognised in the balance sheet at cost price and subsequently measured in the balance sheet at market value. Positive and negative market values for derivative financial instruments are included in other receivables and other debt respectively.

Changes in the market value of derivative financial instruments that are classified and qualify as hedges for market value of a recognised asset or liability are recognised in the profit and loss statement together with changes in the value of the hedged asset or liability.

Changes to the market value of derivative financial instruments classified as and that qualify for hedging of future assets or liabilities are recognised as other receivables or other debt and also in equity. If the future transaction results in the recognition of assets or liabilities, amounts previously recognised as equity will be carried at cost price for the asset or liability respectively. If the future transaction results in earnings or costs, amounts previously recognised as equity will be carried to the profit and loss statement for the period in which the hedged asset or liability affects profits or losses.

For derivative financial instruments that do not meet the conditions for hedge accounting, changes in market value are recognised in the profit and loss statement on an ongoing basis.

Changes in the market value of derivative financial instruments used to hedge net investments in independent foreign subsidiaries are recognised directly in equity.

Profit and loss statement

Net revenue

The company's revenue comprises construction contracts and the company uses IFRS 15 in the interpretation of the Danish Financial Statements Act.

The company's sales contracts are split into individually identifiable delivery obligations that are recognised and measured separately at market value. If a sales contract comprises multiple delivery obligations, the total sales value of the sales contract will be allocated relative to each delivery obligation under the contract.

Revenue is recognised when the control of each identifiable delivery obligation is transferred to the customer.

The recognised revenue is measured at the market value of the agreed price exclusive of VAT and fees collected on behalf of third parties. All forms of discounts will be recognised in revenue.

Any part of the total remuneration that is variable, e.g. in the form of discounts, bonuses, penalties, etc., will be

recognised in revenue only when reasonably certain that no repayments will be made in subsequent periods, i.e. as the result of failure to meet goals, etc.

Sale of goods

The sale of finished goods and commercial products includes the sale of finished goods, asphalt, road equipment, other construction materials, etc. and is recognised in revenue when the control of each individual delivery obligation in the sales contract is transferred to the customer, which, according to the sales conditions, takes place at the time of delivery. Even though a sales contract concerning the sale of finished goods often includes several delivery obligations, they will be treated as one overall delivery obligation, as delivery typically takes place at the same time.

Construction contracts

Construction contracts typically include one delivery obligation that is continuously recognised in revenue in line with the implementation of production, and net revenue corresponds to the sales value of the work performed in the year. Continuous transfer of control to customers for work performed takes place either because the construction takes place at the customer's property, whereby ownership and control are transferred to the customer in line with completion or because the systems are of such a specialised nature that they cannot be used for other purposes without unreasonably large costs, while the customer is also obliged to make ongoing payment for work completed, including reasonable earnings on completed work.

Recognition takes place using input-based settlement methods based on progress status reports in relation to the overall anticipated costs, as this method is considered to be most suitable for reflecting continuous transfer of control.

When the result of a construction contract cannot be reliably considered, only revenue corresponding to incurred costs is recognised to the extent it is believed that they will be recouped.

Production costs

Production costs include costs, including provisions for depreciation and wages, which are paid to achieve the year's net revenue. Production costs also include development costs that do not concern development projects for capitalisation.

Furthermore, provisions for losses on construction contracts are also recognised.

NOTES Note no. 1 Accounting practice used (continued)

Administration costs

Administration costs, etc. include costs incurred for administrative personnel, management, office premises, office expenses, etc., including depreciations.

Other operating income and costs

Other operating income and costs include accounting items of a secondary nature to the main objective of the company.

Performance of equity interests in subsidiaries and joint ventures

Under the equity method, a proportional share of profits after tax in subsidiaries will be recognised in the profit and loss statement. Share of profits after tax in subsidiaries and joint ventures are presented as separate entries in the profit and loss statement. Full elimination of intra-group profits/losses is performed for equity interests in subsidiaries. For equity interests in joint ventures, only proportional elimination of intra-group profits/losses is performed.

Financial income and costs

Financial income and costs comprise interest, currency exchange gains and losses on securities, debt and transactions in foreign currencies, amortisation of financial assets and liabilities and allowances under the on-account tax scheme, as well as realised and unrealised currency exchange gains and losses on receivables and debts in foreign currencies.

Taxes on profit for the year

The company is covered by the Danish rules on compulsory joint taxation for Arkil's Danish companies. Subsidiaries are included in the joint taxation from the date on which they are included in the consolidated accounts and until the date on which they are no longer included in the consolidation.

The parent company, JEAR Holding ApS, acts as the management company for joint taxation and therefore settles all payment of corporation tax with the tax authorities.

The applicable Danish corporation tax is allocated between the jointly taxed companies in proportion to their taxable incomes. In connection with this, companies with tax losses will receive joint taxation contributions from companies that have been able to utilise these losses to reduce their own taxable profits.

The year's tax, consisting of the year's joint taxation contributions and changes to deferred tax, including as a result of changes to tax rates, is recognised in the profit and

loss statement with the proportion that can be attributed to the year's profit and directly in equity with the proportion that can be attributed to items recognised directly in equity.

Balance sheet Intangible fixed assets

Intangible fixed assets are measured at procurement value less accumulated amortisation and depreciation.

Goodwill is depreciated over the estimated financial service life, determined based on the management's experience within each business area. Goodwill is depreciated linearly over the depreciation period, which has been determined to be 20 years. The depreciation period has been determined based on an anticipated repayment period of 20 years, as it relates to strategically acquired companies with a strong market position and a long-term earning profile.

Tangible fixed assets

Land and buildings and technical structures, materials and fixtures and fittings are measured at procurement value less accumulated amortisation. Land is not depreciated.

Assets under construction (valued) are measured at cost.

Cost price includes the acquisition price and costs directly linked to the acquisition up to the date on which the asset is ready for use. For self-constructed assets, the cost price includes direct and indirect costs for materials, components, subcontractors and wages, as well as borrowing costs from specific and general borrowing that directly affects the construction of each asset. The cost price includes the current value of estimated liabilities for the dismantling and removal of the asset and restoration of the site on which the asset was used.

Linear amortisation is performed over the expected useful life based on the following assessment of the assets' expected useful lives:

Buildings	10-50 years
-----------	-------------

Technical plant, machinery and fixtures and fittings	3-15 years
--	------------

NOTES Note no. 1 Accounting practice used (continued)

The basis for amortisation takes into account the residual value of the asset and is reduced by any devaluation. The amortisation period and residual value are established on the acquisition date and reviewed annually. If the residual value exceeds the book value of the asset, depreciation will cease.

In the event of changes to the period of depreciation or residual value, the effect will be recognised prospectively as a change in accounting estimates.

Depreciations are recognised in the profit and loss statement under production and administration costs, respectively.

Profit and loss on the divestment of tangible fixed assets will be recognised as the sales price less sales costs and the book value on the sales date.

Equity shares in subsidiaries and joint ventures

Equity shares in subsidiaries and joint ventures are measured at the proportionate share of the equity value of the companies determined by the parent company's accounting policies less or plus unrealised intercompany profits and losses and plus or less the remaining value of positive or negative goodwill recognised using the acquisition method.

Companies with negative equity are measured at DKK 0 and any receivables from these companies are written down by the parent company's share of the negative equity to the extent it is deemed irrecoverable. If the negative equity exceeds the receivables, the balance will be recognised under provisions if the parent company has a legal or actual obligation to cover the balance deficit of the subsidiary.

Net revaluation of equity interests is carried under equity to the reserve for net revaluation under the equity method, to the extent that the carrying amount exceeds the acquisition value.

Newly acquired or newly established companies are included in the annual accounts from the acquisition date. Sold or liquidated companies are included until the cession date.

Depreciation of long-term assets

The accounting value of tangible and intangible fixed assets as well as equity interests in subsidiaries and joint ventures is evaluated annually to determine whether there are any indications of depreciation beyond that which is specified as amortisation.

If there are indications of depreciation, a depreciation test is conducted on each individual asset and group of assets. Depreciation is applied to the recoverable value if this is lower than the accounting value.

The highest value of the net sales price and capitalised value are used as the recoverable value. The capitalised value is calculated as the current value of the expected net cash flow from the use of the asset or asset group and anticipated net cash flow associated with the sale of the asset or asset group at the end of the useful life.

Previously recognised depreciation is reversed when the justification for the depreciation no longer applies. Depreciation on goodwill will not be returned.

Deferred tax assets are reviewed annually and recognised only to the extent that it is probable that they will be utilised.

Inventories

Inventories are measured at cost price using the FIFO method. If the net realisation value is lower than the cost price, it will be depreciated to this lower value. The cost price for commodities, as well as raw materials and ancillary materials, includes the acquisition price plus transport costs. The net realisation value for inventories is recorded as the sales price less completion costs and costs incurred to execute the sale and is determined taking into account marketability, obsolescence and developments in anticipated sales price.

Amounts owed

Amounts owed from sales and other amounts owed are measured at amortised cost price and evaluated individually. Provisions have been made for anticipated losses.

IAS 39 is used in the interpretation of the Danish Financial Statements Act for the depreciation of financial assets.

Construction contracts

Construction contracts are measured at sales value for the implemented work less on-account invoicing and anticipated loss. Construction contracts typically include one delivery obligation that is continuously recognised in revenue in line with the implementation of production, and net revenue corresponds to the sales value of the work performed in the year.

NOTES Note no. 1 Accounting practice used (continued)

Continuous transfer of control to customers for work performed takes place either because the construction takes place at the customer's property, whereby ownership and control are transferred to the customer in line with completion or because the systems are of such a specialised nature that they cannot be used for other purposes without unreasonably large costs, while the customer is also obliged to make ongoing payment for work completed, including reasonable earnings on completed work.

Recognition takes place using input-based settlement methods based on actual costs incurred in relation to the overall anticipated costs, as this method is considered to be most suitable for reflecting continuous transfer of control.

When the result of a construction contract cannot be reliably considered, only revenue corresponding to incurred costs is recognised to the extent it is believed that they will be recouped.

The sales value is measured based on the degree of completion on the balance sheet date and the total expected income for each ongoing piece of work. The degree of completion will be determined based on completion statements.

When it is probable that the total contract costs for a construction contract will exceed the total contract revenue, the expected loss on the construction contract will immediately be recognised as a cost. When the sales value on a construction contract cannot be reliably recognised, the sales value of the costs incurred for which recovery is probable will be measured.

Construction contracts for which the sales value of the implemented work exceeds on-account invoicing and anticipated loss will be recognised under amounts owed. Construction contracts for which on-account invoicing and anticipated loss exceed the sales value will be recognised under liabilities.

Advance payments from customers are recognised under liabilities.

Costs in connection with sales and contracting will be recognised in the profit and loss statement as they are incurred.

Equity

Reserve for foreign currency translation adjustments

The reserve for foreign currency translation adjustments includes exchange rate differences arising from the conversion of accounts for entities with functional currencies other than Danish kroner, exchange adjustments

concerning assets and liabilities that form part of the Group's net investment in such entities and exchange adjustments concerning hedging transactions that hedge the Group's net investment in such entities.

Reserve for hedging transactions

Hedging reserves include the accumulated net change in market value on hedging transactions that meet the criteria for hedging of future cash flows and for which the hedged transaction has not yet been realised.

Reserve for net revaluation using the equity method

Reserve for net revaluation using the equity method includes net revaluation of equity interests in subsidiaries as well as joint ventures in relation to cost price.

The reserve can be eliminated in the event of a loss, realisation of capital shares or changes to accounting practices.

The reserve cannot be recognised at a negative amount value.

Dividends

Proposed dividends are recognised as a liability at the time of adoption at the annual general meeting (declaration date). Dividends that are expected to be paid for the year are shown as a separate item under equity.

Current tax and deferred tax

Under joint taxation, the subsidiaries' liabilities to the tax authorities for their own corporation tax are settled concurrently with the payment of joint taxation contributions to the management company.

Payable and receivable joint taxation contributions are recognised in the balance sheet under outstanding accounts with associated companies.

Deferred tax is measured using the balance-oriented debt method on all intermediate differences between book and tax values on assets and liabilities. Deferred tax is not recognised on temporary differences concerning taxable non-depreciation goodwill and office premises and other items for which temporary differences, except for company acquisitions, have arisen on the acquisition date without having any effect on profits or taxable income. In cases where the tax value can be settled according to different taxation rules, deferred tax will be measured based on the management's planned use of the asset or settlement of the liability respectively.

NOTES Note no. 1 Accounting practice used (continued)

Deferred tax assets, including the taxable value on tax loss carry-forwards are recognised under other long-term assets with the value at which they are expected to be used, either by elimination in tax on future earnings or against deferred tax liabilities within the same legal tax entity and jurisdiction.

Adjustments are made to deferred tax resulting from elimination of unrealised intragroup profits and losses.

Deferred tax is measured on the basis of the tax rules and rates in the respective countries that apply on the balance sheet date when the deferred tax is expected to be redeemed as current tax.

Provisions

Provisions for liabilities are recognised when the company, as a result of a past event, has a legal or actual obligation and it is probable that the company's financial resources must be used in order to cover the liability.

Provisions are measured at net realisable value or at fair value, where fulfilment of the obligation in terms of time is expected to be far into the future.

Liabilities

Financial liabilities are recognised at the time of borrowing as the received proceeds after deductions for any transaction costs incurred. In subsequent periods, the financial liabilities are measured at amortised cost price using the effective interest method so that the difference between the proceeds and the nominal value is recognised in the profit and loss statement over the borrowing period.

The capitalised residual leasing liability on financial leasing contracts is also recognised in financial liabilities.

Other financial liabilities are measured at net realisation value.

Leasing

IAS 17 is used as the interpretative aid for the classification and recognition of leasing contracts.

Leasing liabilities are allocated to financial and operational leasing liabilities.

Leasing contracts concerning fixed assets, in which the company bears all of the significant risks and advantages associated with the property rights (financial leasing), are measured at first instance in the balance sheet at the lowest value of the market value and the current value of the future leasing provisions. The internal base interest in the leasing agreement or the alternative borrowing interest will be used as the discount rate when calculating present value.

Financially leased assets are then treated as the company's other assets.

The capitalised residual leasing liability is recognised in the balance sheet as a debt liability, and the leasing provision's interest is recognised for the duration of the contract in the profit and loss statement.

All other leasing contracts are treated as operational leasing. Dividends in connection with operational leasing and other rental agreements are recognised in the profit and loss statement for the duration of the contract. The company's total liabilities concerning operational leasing and rental agreements are entered under miscellaneous entries in the notes.

Cash flow statement

The cash flow statement shows the company's cash flows allocated to operating, investment and financing activities for the year, as well as displacement of cash and cash equivalents at the beginning and end of the year.

Cash flow from operating activities

Cash flows from operating activities are recognised as the annual results adjusted for non-cash operating items, changes to working capital and corporation taxes paid.

Cash flow from investment activities

Cash flow from investment activities includes payments in connection with the acquisition and sale of companies and activities, as well as acquisition and sale of intangible, tangible and financial assets.

Cash flow from financing activities

Cash flows from financing activities include changes to the size or composition of the company's share capital and related costs as well as borrowing, repayment of interest and payment of dividends to shareholders.

Cash and cash equivalents

Cash and cash equivalents include cash holdings and short-term securities with a maturity of less than three months on the acquisition date and that can be converted to cash holdings without hindrance and for which there is only insignificant risk of value changes.

Segment information

Information will be provided on geographical markets. The segment information is in line with the Group's accounting policies, risks and internal financial management. The company has therefore omitted information on the distribution of net revenue across business segments, as the business segments do not differ from each other.

NOTES Note no. 2 Significant accounting estimates, assumptions and assessments

Estimation uncertainty

Recognition of the book value of certain assets and liabilities requires assessments, estimation and assumptions about future events.

The most significant estimates include the extent of completion of construction contracts settled based on completion statements and service lives for technical plant, materials and fixtures and fittings.

The extent of completion for construction contracts is recognised for each contract as the ratio of the realised progress measured by the value of produced units and the anticipated end value of the construction contracts, including the outcome of disputes.

Assessment of disputes regarding additional works, deadline extensions, daily penalty fine demands, etc. is generally done based on the nature of the circumstances, relationship with the client, stage of negotiation, previous experience and thus also an assessment of the probable outcome of each case. For significant disputes, external legal reviews are included in the basis for the assessment.

Estimations linked to the future settlement of residual work depend on a number of factors, as the assumptions for a project may be changed in line with the execution of the

work. Similarly, the assessment of disputes may change in line with the progress of the cases.

The actual results could therefore deviate from the anticipated results.

Estimates and assumptions are made based on historical experience and other factors that management consider reasonable under the circumstances but which are inherently uncertain and unpredictable. The assumptions may be incomplete or inaccurate and unexpected events or circumstances may arise. Furthermore, the company is exposed to risks and uncertainties that may result in the actual outcomes deviating from these estimations.

It may be necessary to change previous estimations as a result of changes to the circumstances that formed the basis for the previous estimations or due to new knowledge or subsequent events.

Estimates that are significant to financial reporting are made, for example, in connection with the settlement of depreciation and amortisation, sales prices in construction contracts and contingent liabilities.
